

# All About Lips Script

Puffy, pouty, come-hither, kissable lips ... Everyone wants them or to kiss them!

Have your lips been working for you? Are you getting noticed by others?

**Today, we will be learning about lip solutions.**

Hi, I'm Ingrid at DermaHealth Laser Associates, where the doctor makes the difference.

**Lips are the finishing touch on a beautiful face:**

1. Both filler and Botox make the difference with plump, pouty lips:
  - Filler injected into the areas makes thinning lips more visible,
  - Non-thinning lips show volume in the lip area with noticeable results.
2. Botox creates a cupid's bow on the upper lip line for a Lip Flip with flattering results. If desired, we can apply additional filler.
3. To finish the look, we recommend Cosmedix's Lip Plumping Mask called Enhance.
  - It conditions dehydrated lips.
  - It protects them from becoming dry or chapped.
  - Use it during the daytime for protection or at nighttime to deeply penetrate and condition lips that need extra attention.
  - Filled with deep emollients, this mask is optimal.
4. Cosmedix's Lumi Crystal is a hydrator to keep lips soft and plump.

Apply Lumi Crystal after a lip treatment for noticeably juicy lips with a luminescent shine, or apply it as a topcoat above lipstick.
