

# EltaMD Stick Script

Hi, I'm Ingrid

Thank you for visiting us at DermaHealth Laser, where the doctor makes the difference.

Are you a fan of sunscreen? But not the sticky gooey mess it leaves on your fingertips?

Consider EltaMD UV Stick [holding product]:

- This broad-spectrum SPF 50 stick is oil-free and works well on the face and body.
- It's safe for adults and children and it works on all skin types!
- Reapply it after 80 minutes after water sports.
- And my favorite ... This stick doesn't melt, so you can leave it in your car at high temperatures.

Just remove the cap, twist the bottom like a deodorant stick, and easily apply to your face or body. No need for smoothing.

- Use it while golfing on your arms.
- Try it before swimming, on your face, arms, everywhere.
- Apply it in the car, while waiting in traffic to avoid sun exposure on your hands.

You'll love it, as will your family! And mess be gone!

Thank you for watching today. If you enjoyed this video, be sure to use code ELTASTICK when calling to make your appointment. Check back for more skin tips and remember to like share and subscribe to receive our social media-only specials at DermaHealth Laser Associates, 713-270-6505.
